

DESIGN YOUR SPACE

TilePlanner is the 3D interior design Web App that can be customized and integrated on your website.

TILEPLANNER

by MATICAD

TilePlanner is an online configurator that allows anyone on your website to easily design their space using products from your catalog. No need to install any software or complete any training.

EXPAND YOUR DIGITAL OFFERING AND INCREASE YOUR WEB PRESENCE BY INTEGRATING TILEPLANNER.

DESIGN ROOMS WITH EASE USING INTEGRATED PRODUCT CATALOGS.

ANALYZE USAGE STATISTICS, GAIN INSIGHTS ON POPULAR PRODUCTS, AND GENERATE NEW LEADS DIRECTLY WITHIN THE PLATFORM.

**YOUR BRAND
HERE**

YOUR CLIENT AT THE CENTER OF THE DESIGN PROCESS

Give your customers an easy-to-use online design tool that lets them design custom interior spaces and freely explore design solutions for their home.

TilePlanner is a simple online design tool that can be integrated on your **website**, letting all your web visitors familiarize themselves with your products. A versatile tool, TilePlanner can be used as a platform for lead generation and to build your brand with potential clients. You can gather usage statistics and gain insights on popular products within the tool.

FEATURES

- Integrated on your website
- Simple to use, no training necessary
- HD product library
- High-quality real-time graphics
- Modular furniture configurator
- Integration with TileInspector
- Laying pattern selection
- Change grout size and color
- Project summary PDF
- Share projects with DomuS3D
- Detailed analytics and usage reports

INTEGRATED ON YOUR WEBSITE

TilePlanner can be integrated on your company website and is accessible from any browser on any device, no installation necessary.

Two types of integration available:

- **TOP'N GO Integration:** quickest and easiest type of integration which creates a dedicated TilePlanner web page hosted by Maticad, customized and branded for your company.
- **TOTAL Integration:** more flexible option with possibility to customize user interface of the tool. Product database and analytics available on company website. This type of integration allows for **connection to e-commerce platform.**

EASY TO USE: NO TRAINING NECESSARY

TilePlanner is an extremely simple design tool with dedicated features that let users build simple, yet complete, rooms.

With intuitive commands, there is **no training necessary** to learn to use the tool; simply watch a short video tutorial to learn how to navigate the user interface and complete a project on your own.

HIGH QUALITY PRODUCT LIBRARY

The product library available in TilePlanner is **curated to the smallest detail to guarantee the highest level of realism possible for your 3D projects.**

The photorealistic effects in TilePlanner are achieved through a comprehensive mapping process, enhancing the surface finish and material properties of each product.

HIGH-QUALITY GRAPHICS IN REAL-TIME

Thanks to the care and quality of materials, along with a powerful graphics engine, TilePlanner lets users obtain photorealistic results in real-time.

MODULAR FURNITURE

TilePlanner is a complete tool able to host modular furnishing **elements** and **parametric 3D items**, such as **vanities, kitchens, and shower enclosures** in its product catalog.

TILEINSPECTOR INTEGRATION

TilePlanner can integrate an optional online module, **TileInspector**, through which users can visualize a detailed high-quality 3D digital recreation of the selected product.

With TileInspector, users are able to explore every detail of a product, examining its material properties while getting a better understanding of the almost tangible 3D size of the tile.

AVAILABLE LAYING PATTERNS

Among the optimized features offered in **TilePlanner** is the ability to select from a **wide range of automatic laying patterns**, which let you quickly simulate intricate professional installations in just one click.

The screenshot displays the TilePlanner web application interface. On the left, a sidebar contains a 'Tiles' tab and a 'Furniture' tab. Below these are search and filter options. The 'Patterns' section lists four options: 'Staggered 1', 'Staggered 3', 'Staggered 2', and 'Staggered 4', each with a small preview image. The main area shows a 3D rendering of a living room with a tiled floor, a white sofa, a round table, and chairs. Dimensions are shown: 481.8 cm for the room width and 307.8 cm for the room depth. Three inset diagrams show different laying patterns: a brick pattern, a staggered pattern, and a grid pattern. Each inset diagram has a legend with 'A x B' and '1' or '2' indicating tile types and their orientations.

CHANGE GROUT SIZE AND COLOR

TilePlanner automatically matches an **optimized default grout size and color** with each individual product inserted into a project, but users always have the ability to change grout size and color for a custom choice.

PROJECT SUMMARY PDF

Once a project has been completed, users can generate a **project summary** containing the final room scene and the details of the material applied to the scene. **Save it and share it as a PDF or simply print it out.**

Immagine	Codice	Descrizione	Formato	Qt
	PGZENK1	MOS KUBIC BREACH G.LUX 170X292	29,2x17cm	8,31 m ²

SHARE PROJECTS WITH DOMUS3D

TilePlanner includes the ability to share projects with the professional interior design software **DomuS3D**.

Opening a TilePlanner project in DomuS3D gives users the ability to complete the project with a professional tool, adjusting architectural and design elements of the room, and refining aesthetic details, as well. Users can render room scenes using the **V-Ray** rendering engine, integrated in DomuS3D, to obtain photorealistic images.

ANALYTICS

Companies that integrate **TilePlanner** on their website have the possibility to receive detailed analytics reports on users accessing the program and their activity such as number of projects, number of logins, and user information gathered during registration.
